# CYBERSECURITY SOLUTIONS

Designed To Keep Your District Safe and Secure

## OUR LAYERED APPROACH TO CYBERSECURITY

Cybersecurity attacks are on the rise. As schools continue to increase their dependence on technology, there has never been a more mission-critical moment to ensure your students and staff are protected against ransomware and malware attacks.

Our goal is to keep administrators focused on student learning instead of spending time trying to keep up with emerging threats. From cybersecurity assessments to dark web scanning, we can help you understand where your organization is most vulnerable. Plus, our team has the knowledge to help ensure your school complies with cybersecurity insurance coverage.

### NIST ASSESSMENT

Our assessment will assist you with understanding the next steps to increase your districts security stance.

### CYBERSECURITY CONSULTING

Safeguard your critical data & infrastructure with a Five Star cybersecurity consultant.

### CYBERSECURITY DEBRIEF

Ask us about how to subscribe to our quarterly newsletter: "The K-12 Cybersecurity Debrief"

### CONSIDER THESE QUESTIONS

- How do you currently assess your cybersecurity needs, and who is responsible for this assessment?

- In the event of a cybersecurity incident, how confident are you in your ability to maintain teaching and administrative operations?

- When was the last time your staff participated in a simulated cybersecurity incident, and what was the outcome?

If you don't have a strong answer to any or all of these questions, we can help!

# CYBERSECURITY SOLUTIONS

Designed To Keep Your District Safe and Secure

### Asset & Vulnerability Management

Keep track of all devices and software connected to the network, helping manage risks and ensure compliance.

### Cloud Security

Perform regular cloud security audits to ensure access control, best practices, and security standards.

### Content Filtering

Uses filtering technologies to block access to inappropriate, harmful, or malicious websites.

### Data Security

Safeguards sensitive information with encryption during transfer and storage.

### Data Loss Prevention

Monitors and prevents data breaches by detecting and blocking potential data leaks or unauthorized transfers.

### Governance

Create, distribute, and enforce security policies while ensuring compliance with requirements.

### Identity & Access

Only approved users can access systems and data using MFA and SSO to manage and monitor user access.

### IR & Recovery Plan

Step-by-step approach for developing and maintaining IR and DR plans, specifically for K-12 schools.

### Network

Employs firewalls and IDS to monitor network traffic, preventing malicious activities and unauthorized access.

### SOC/SIEM & Endpoint

Protects devices on network from threats using AM and AV solutions and real-time responses to security events.

### Risk Management

Identifies and manages risks associated with external service providers who have access to data

### Training & Awareness

Offers online training & tabletop exercise to educate staff on best practices and new emerging threats.
